Also available: Play-along tracks

Practice every montuno in The Gringo's E-Guide to Salsa Piano with this set of play-along Mp3s. Includes 8 Mp3 tracks which serve to practice all montunos featured in the book. Tracks are 2:10 in length and have acoustic bass, claves, congas, bongos and timbales (cáscara). Go to <u>http://www.vanessarodrigues.com/salsa-ebook</u>

Chapter 1: Get Up Offa That Beat

Rumba Clave

There is only one teeny-tiny difference between **Son Clave** and **Rumba Clave**: in Rumba Clave, the 3rd note of the 3-bar of the clave comes one 8th note later.

NOTE: the difference between the **Son Clave** and **Rumba Clave** is *stylistic only*. The phrasing will follow the same rules regardless of whether it's Son Clave or Rumba Clave

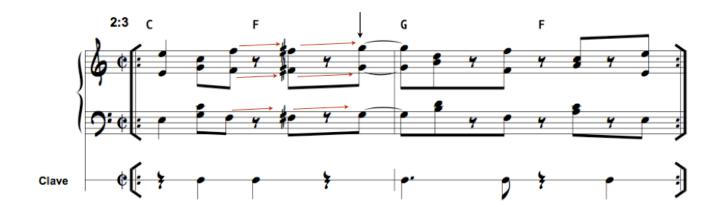

TIP: It is WAY more important to understand the difference between **clave direction (2:3 vs 3:2)** than between **clave style (son vs rumba)**!!

For simplicity's sake, the rest of the examples in this book will only refer to **Son Clave!**

Chapter 2: ¿Hablas Salsa? Melody & Language

Montuno #3

One very common melodic device is to lead up to an important melody note using the two semi tones that come right before it. In the following example, the important melody note is G, and we are using F and F# as *passing tones* to lead up to it.

REMINDER: you can always remove the doubled octave in the RH pinky and the montuno will still sound almost exactly the same.

Chapter 3: Swing in Perfect Harmony

Montuno #3 (continued)

Now watch carefully ... to harmonize this in 10ths, we will take the three chords in the RH and bring them all up to the *next inversion*; the original 1st-inversion C chord will now be played in *2nd-inversion* with the 5th in the melody, and the G and F chords in *1st inversion*, with the 3rd in the melody.

The LH will stay exactly where it was, and *voila*, you now have a montuno line harmonized in 10ths:

NOTE: all RH melody notes will be up a 3rd from where they were originally, so this also includes the passing notes.

The original passing notes F and F# will now become A and A#.

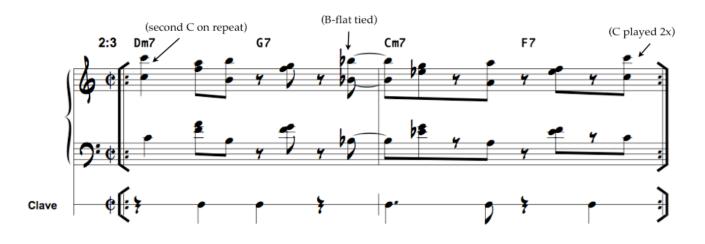

See video example #22

Chapter 4: Turn the Beat Around; Montunos in 3:2

And here is montuno #2a shown in both the original 2:3 and then in 3:2, with exactly the same differences in rhythm and format:

Chapter 5: Minor Variations

Montuno #3

The major 3rd of both the I chord (Cm) and the IV chord (Fm) become minor, but the V chord (G) always stays major.

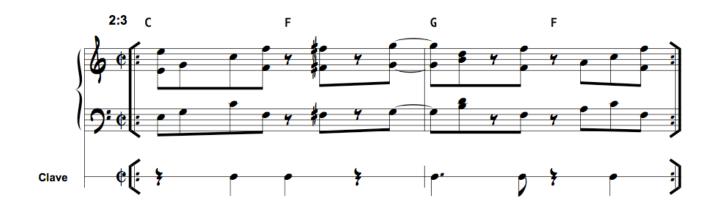

This progression comes straight from the *Harmonic Minor* scale.

Chapter 6: Hot Sauce! Spicing Up the Montuno Rhythm

Montuno #3, Rhythmic Variation #1

Chapter 7: Three More Essential Montunos

Montuno #6

This is a classic fun-with-bass-players montuno!

One of the most delicious things about salsa piano is playing melodies in 10ths with the bass player!

In this montuno in C-minor, we descend from I (Cm), down through the flat-VII (Bb), flat-VI (Ab) to V (G).

See video example #44

In the first bar you can see where the montuno lines up in 10ths with the bass.
